TECHNICAL SPECIFICATIONS

All Granitech ventilated facades are based on integrated systems comprising variable thickness porcelain tiles (we recommend safety mesh as itemized in UNI 11018:2003), insulating layer and aluminum structure. The structure consists of extruded profiles and brackets in 6000 series, 6060 aluminum alloy, in accordance with European standard UNI EN 573-3, T6 physical properties (UNI EN 515).

GHP ventilated facades consist of the following components:

- Thermal spacer in shaped polypropylene, to be positioned between the anchor bracket and the building wall.
- L-section anchor bracket, with longitudinal ridge, equipped with a spring created by bending the bracket itself.
- Suitable fixing for anchoring to the support.
- Black painted T-section uprights, the surface of the core features longitudinal ridges for fixing anchor brackets (where necessary they may be substituted for tubular square profiles).
- Aluminum or stainless steel rivets for fixing the uprights to the brackets.
- Due preparation of the surfaces of structural joint supports, in accordance with manufacturer's recommendations (ETAG 002 and EN 13022) aluminum or stainless steel, for fixing the uprights to the brackets.
- 6mm thick porcelain tiles. Suitably on the back, installed directly on the uprights with single component structural adhesive fixing, with continuous vertical joint or staggered vertical joints.
